

GXI

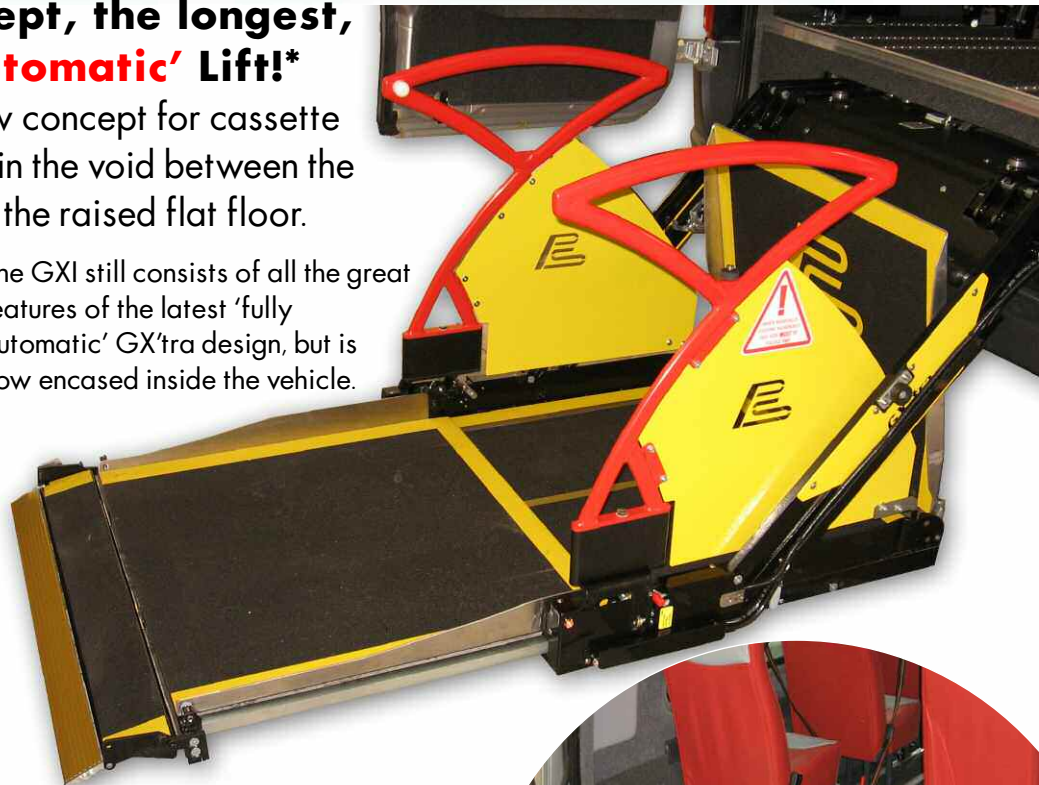

internal under floor cassette lift

Brand new concept, the longest, widest 'Fully Automatic' Lift!*

The GXI is a totally new concept for cassette lifts. The lift is situated in the void between the standard van floor and the raised flat floor.

The GXI still consists of all the great features of the latest 'fully automatic' GX'tra design, but is now encased inside the vehicle.

The main advantage of having the lift mounted inside the raised floor means it is away from all weather conditions, general dirt and grime which all effect the lifts life expectancy. Also ground clearance issues are eliminated.

- Longer/wider bridge plate that utilises a newly designed low-maintenance mechanism
- Huge usable platform size 825mm x 1505mm
- Self levelling, two piece roll off ramp
- 350kg SWL
- Manual override on all systems
- Eliminates manual handling issues

Worldwide
Patent Pending

Extended Warranty Available

*** GXI - an automatically extending two piece platform**
